

Kwik-Set™ Flip Down Lens

Self Facing System with Fold Down Lens for Faster, Easier Stocking

Cut Stocking Time & Labor Costs

The fold-down front stop widens the loading opening, letting employees stock shelves faster, no lifting over barriers, no slowdowns. Less time stocking means reduced labor costs and more time on the floor.

Generate More Revenue Per Fixture.

A lower track profile than competing systems enables tighter vertical spacing, so retailers can add an extra shelf row and dramatically increase SKUs and facings. More product on the shelf means more sales per square foot.

Never Lose a Sale to a Messy Shelf

The Kwik-Set pusher system automatically keeps products faced and organized at all times and in multiple depths to fit your needs. Full, tidy shelves drive shopper confidence and conversion with zero effort from your team.

Stock More SKUs, Capture More Sales

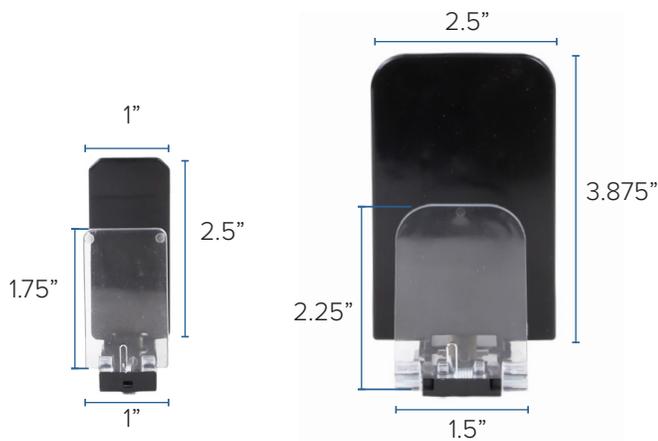

A narrower minimum facing width than competing systems lets retailers fit more products across every shelf. Expand your assortment, maximize facings for top sellers, and build a better planogram to boost category performance.
